

Mechanical-to-Electrical Energy Conversion

11. Variable Speed Operation of Synchronous Generators

Hideaki Fujita
fujita@ee.e.titech.ac.jp

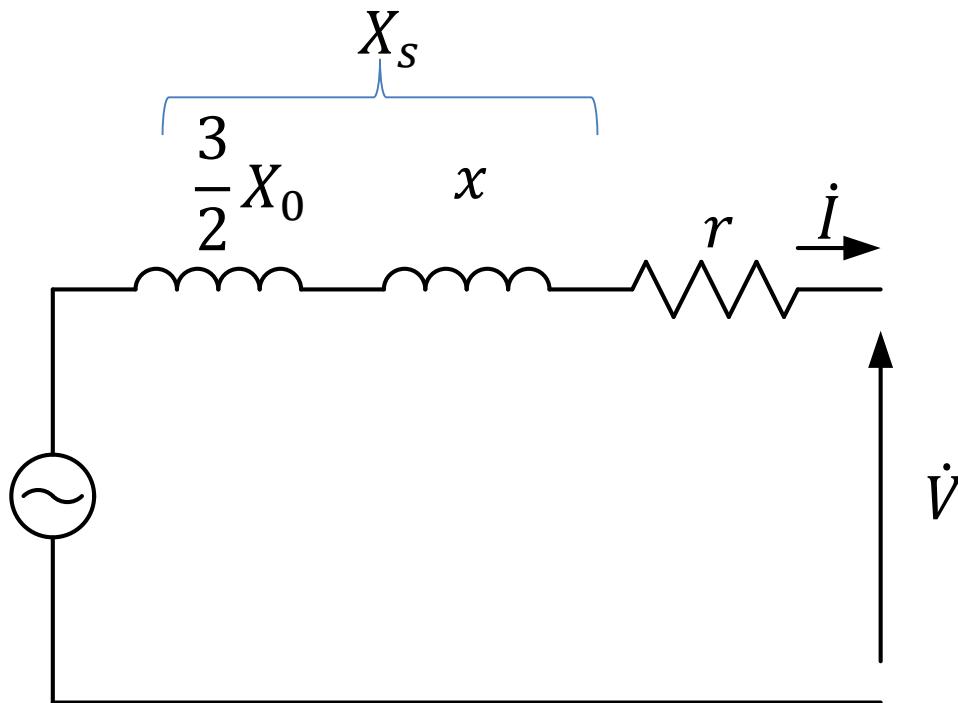

Contents of Today

1. System Configurations
2. Fundamental principles
3. Fundamental characteristics.

Single-Phase Equivalent Circuit

E_0 : No-load Electromotive Force

X_0 : Reactance of the Self Inductance

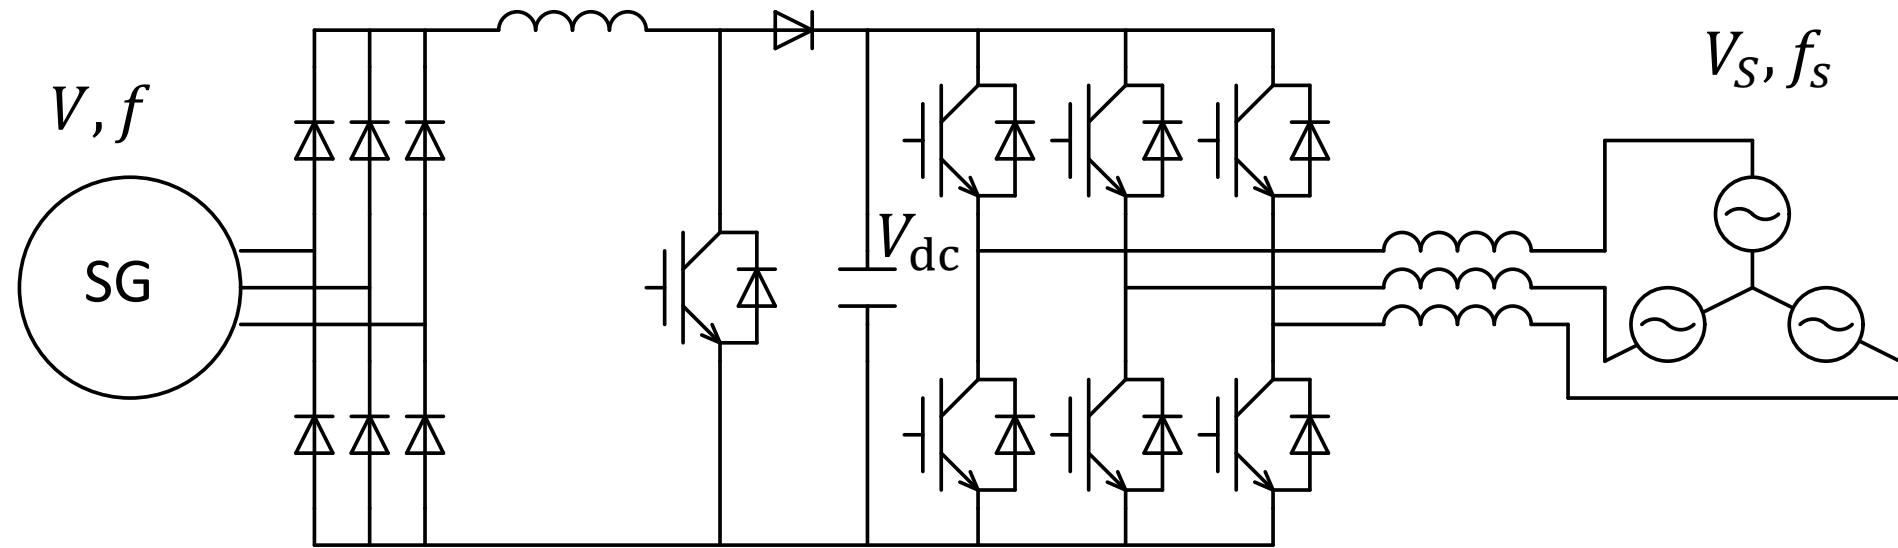

x : Leakage Reactance

r : Winding Resistance

X_s : Synchronous Reactance

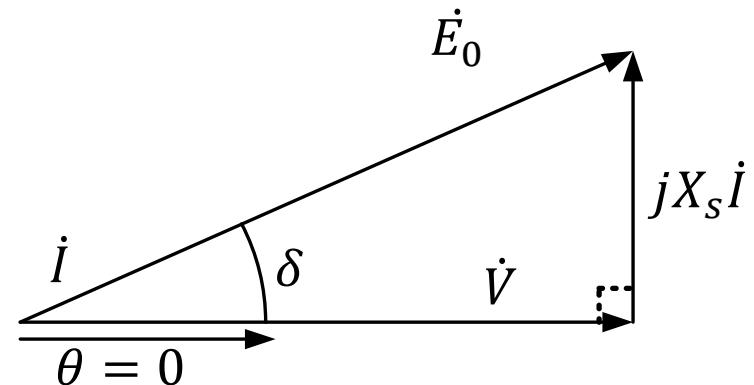

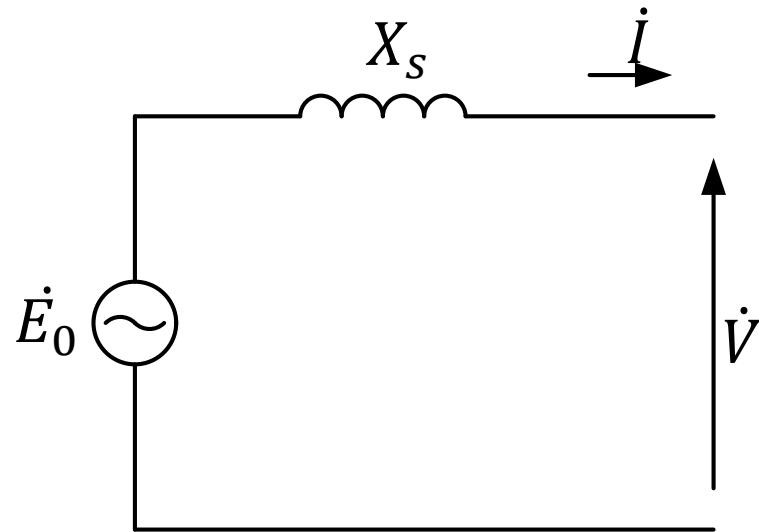

Diode Rectifier with a Boost Converter

- Diode rectifier: Unity power factor
- Boost converter: Regulation of V_{dc}

Phasor Diagram

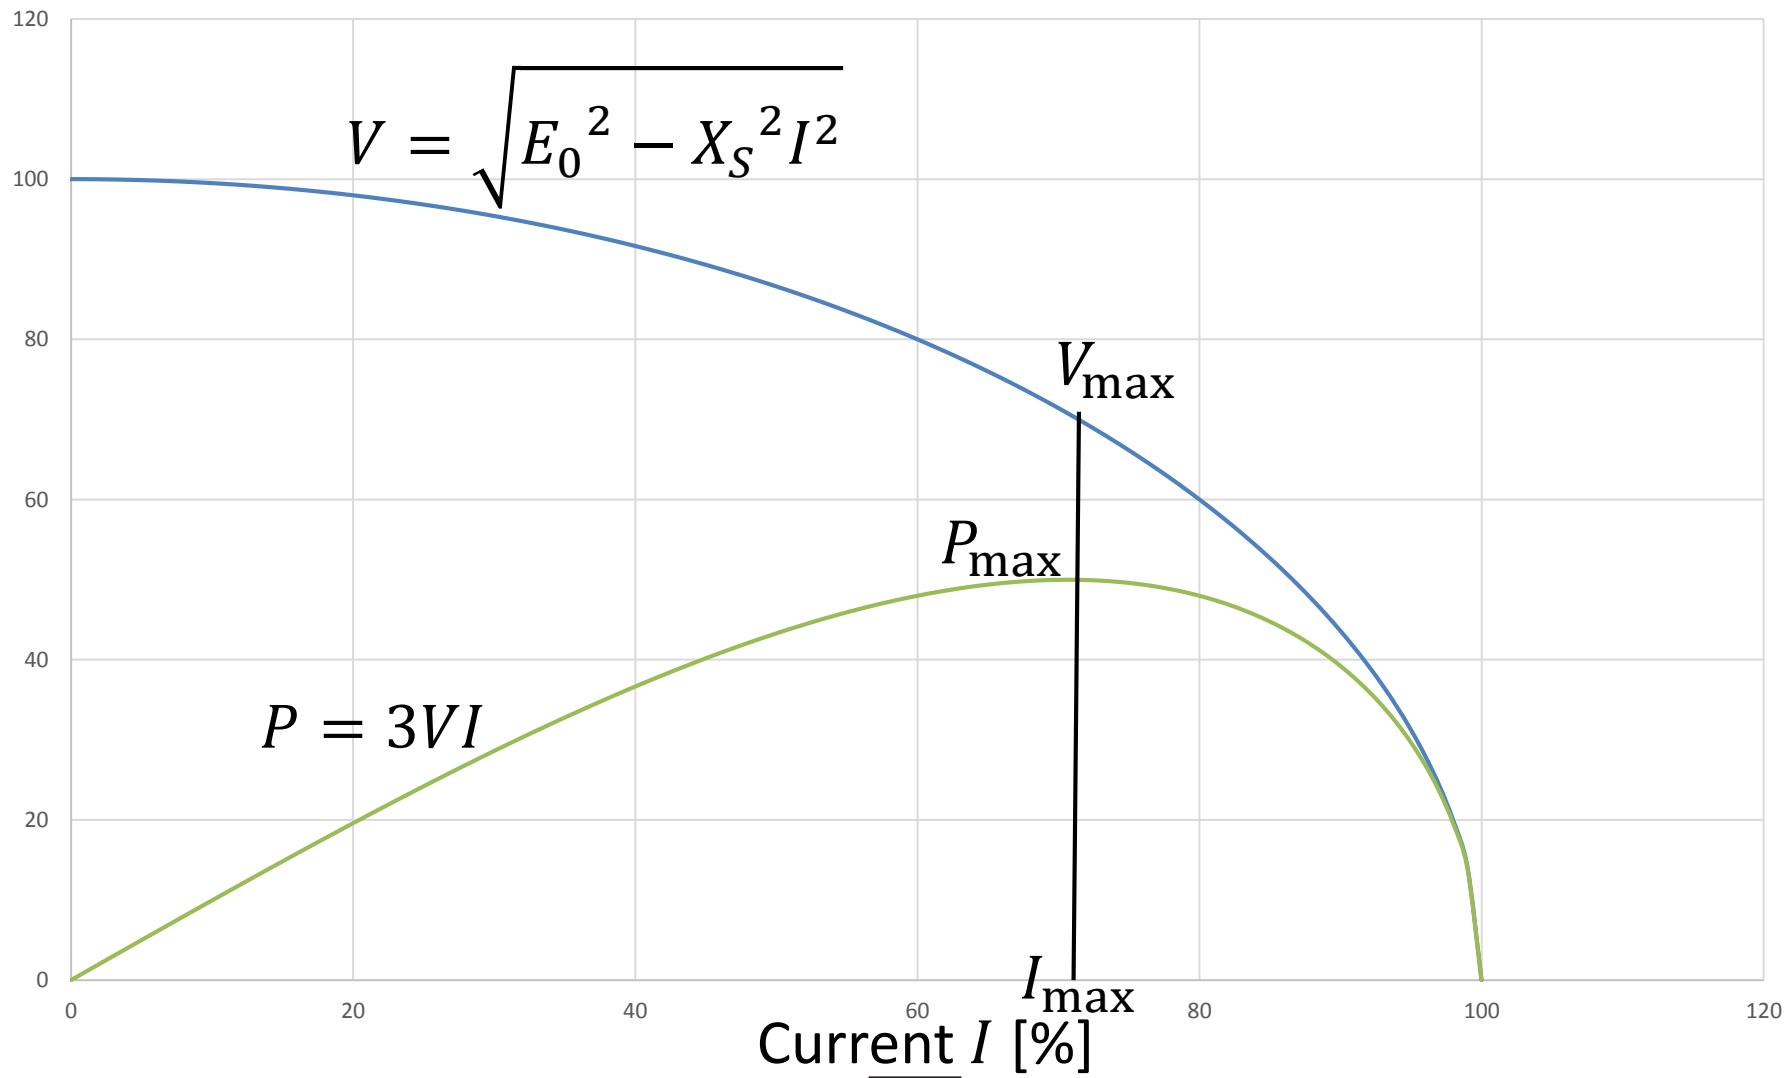

Unity Power Factor: $\theta = 0$

$$\dot{E}_0^2 = V^2 + X_s^2 I^2$$

$$V = \sqrt{\dot{E}_0^2 - X_s^2 I^2}$$

Voltage and Power

To be Continued in the Lecture.....
