

# 6. Dielectric Waveguide

$$\epsilon_r = n^2$$

## 6.1 Dielectric slab waveguide

EM waves are classified into two groups, TE and TM mode.

$$\frac{\partial H_z}{\partial y} + j\beta H_y = j\omega \epsilon E_x$$

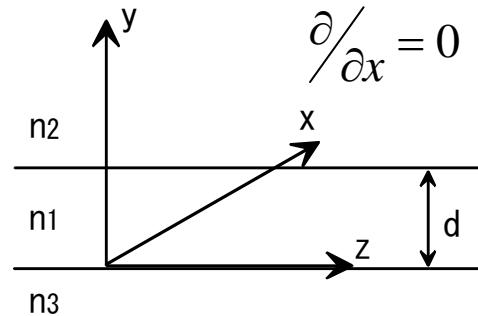

$$-j\beta H_x = j\omega \epsilon E_y$$

$$-\frac{\partial H_x}{\partial y} = j\omega \epsilon E_z$$

$$\frac{\partial E_z}{\partial y} + j\beta E_y = -j\omega \mu_0 H_x$$

$$-j\beta E_x = -j\omega \mu_0 H_y$$

$$-\frac{\partial E_x}{\partial y} = -j\omega \mu_0 H_z$$

asymmetric slab waveguide

$$\frac{\partial^2 E_x}{\partial y^2} + (\omega^2 \epsilon \mu_0 - \beta^2) E_x = 0$$

# Dielectric slab waveguide : TE mode

$$E_x = \begin{cases} (A \cos ud + B \sin ud) e^{-w_2(y-d)} & : y \geq d \\ A \cos uy + B \sin uy & : d \geq y \geq 0 \\ Ae^{w_3 y} & : 0 \geq y \end{cases}$$

$$w_2 = \sqrt{\beta^2 - n_2^2 \omega^2 \epsilon_0 \mu_0} = \sqrt{\beta^2 - n_2^2 k_0^2}$$

$$u = \sqrt{n_1^2 \omega^2 \epsilon_0 \mu_0 - \beta^2} = \sqrt{n_1^2 k_0^2 - \beta^2}$$

$$w_3 = \sqrt{\beta^2 - n_3^2 \omega^2 \epsilon_0 \mu_0} = \sqrt{\beta^2 - n_3^2 k_0^2}$$

$$k_0 = \omega \sqrt{\epsilon_0 \mu_0} = \frac{2\pi}{\lambda}$$

$$H_z = \frac{1}{j\omega\mu_0} \frac{\partial E_x}{\partial y} = \frac{1}{j\omega\mu_0} \times \begin{cases} -w_2(A \cos ud + B \sin ud) e^{-w_2(y-d)} & : y \geq d \\ u(-A \sin uy + B \cos uy) & : d \geq y \geq 0 \\ w_3 A e^{w_3 y} & : 0 \geq y \end{cases}$$

boundary condition :  $E_x$  and  $H_z$  must be continuous at  $y=0, d$ .

$$\tan ud = \frac{u(w_2 + w_3)}{u^2 - w_2 w_3}$$

characteristic equation

# Dielectric slab waveguide : TM mode

$$\frac{\partial H_z}{\partial y} + j\beta H_y = j\omega \epsilon E_x$$

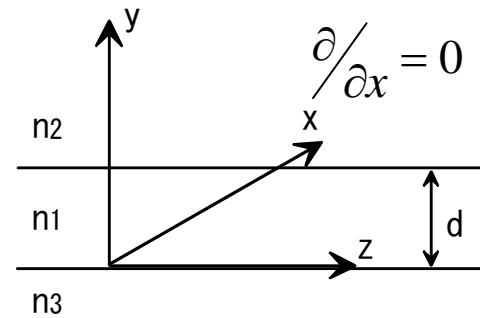

$$-j\beta H_x = j\omega \epsilon E_y$$

$$-\frac{\partial H_x}{\partial y} = j\omega \epsilon E_z$$

$$\frac{\partial E_z}{\partial y} + j\beta E_y = -j\omega \mu_0 H_x$$

$$-j\beta E_x = -j\omega \mu_0 H_y$$

$$-\frac{\partial E_x}{\partial y} = -j\omega \mu_0 H_z$$

$$\tan ud = \frac{\frac{u}{n_1^2} \left( \frac{w_2}{n_2^2} + \frac{w_3}{n_3^2} \right)}{\left( \frac{u}{n_1^2} \right)^2 - \frac{w_2}{n_2^2} \frac{w_3}{n_3^2}}$$

# symmetric slab waveguide : TE mode

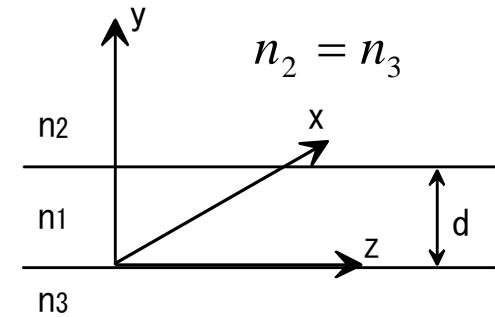

symmetric slab waveguide.

$$\tan 2u \frac{d}{2} = \frac{2uw}{u^2 - w^2} = \frac{2 \frac{w}{u}}{1 - \left(\frac{w}{u}\right)^2} \quad (\text{TE mode})$$

$$w = w_2 = w_3$$

$$\tan^2 \frac{ud}{2} + \left( \frac{u}{w} - \frac{w}{u} \right) \tan \frac{ud}{2} - 1 = 0$$

$$\left( \tan \frac{ud}{2} - \frac{w}{u} \right) \left( \tan \frac{ud}{2} + \frac{u}{w} \right) = 0$$

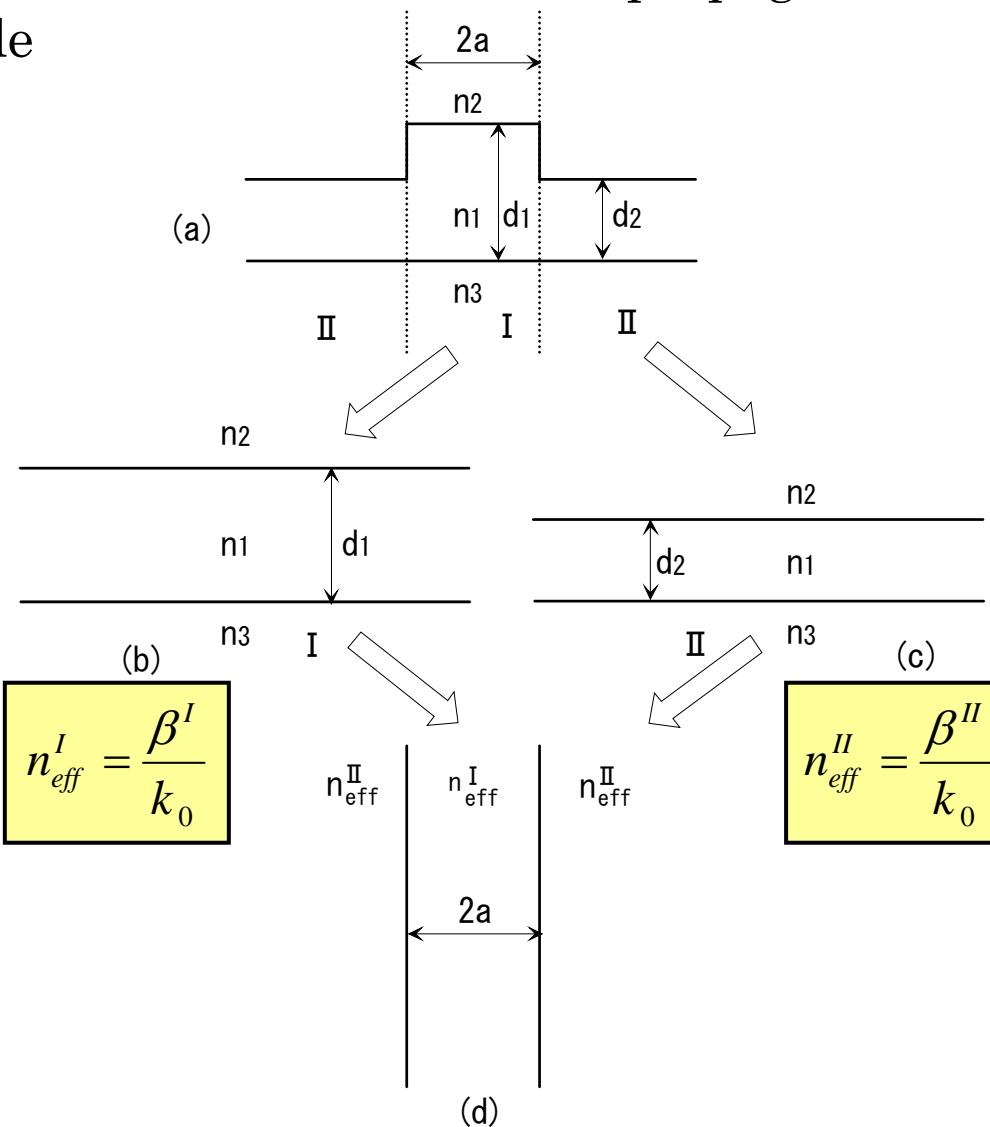

$$\tan \frac{ud}{2} = \frac{w}{u} \quad (\text{even mode})$$

$$\tan \frac{ud}{2} = -\frac{u}{w} \quad (\text{odd mode})$$

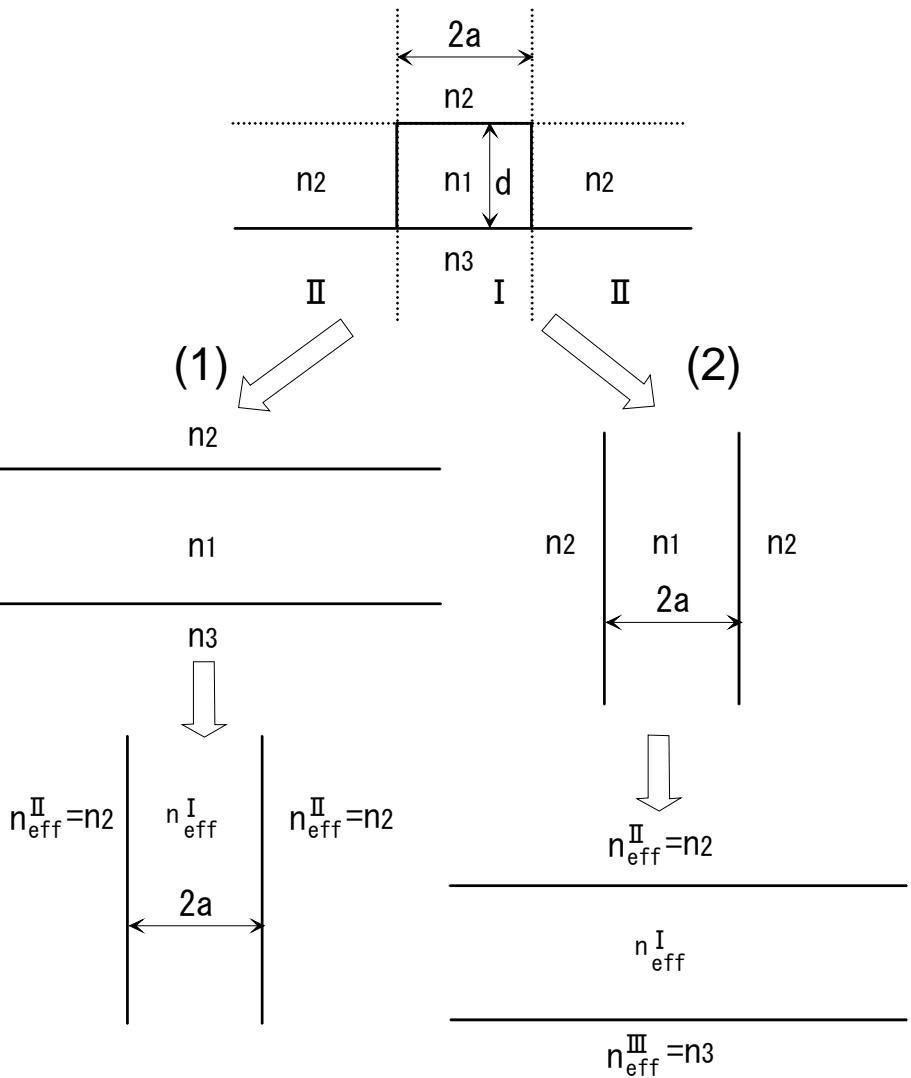

## 6.2 Effective Index Method (EIM)

Approximate method to determine the propagation constant of 3D-waveguide

# 6.3 Generalized Effective Index Method (GEIM)

issue to be considered :

$$\begin{array}{c} n_2 \\ \hline n_1 \\ \hline n_3 \end{array}$$

$$n_{eff}^I = \sqrt{n_1^2 - \left(\frac{k_y}{k_0}\right)^2}$$

recursive procedure

$$\begin{array}{c} n_{eff}^{II} = n_2 & n_{eff}^I = n_2 \\ | & | \\ 2a & 2a \\ | & | \end{array}$$

$$\begin{aligned} \beta &= \sqrt{n_{eff}^I{}^2 - \left(\frac{k_x}{k_0}\right)^2} \\ &= \sqrt{n_1^2 - \left(\frac{k_x}{k_0}\right)^2 - \left(\frac{k_y}{k_0}\right)^2} \end{aligned}$$

## 6.4 Perturbation Feedback Method

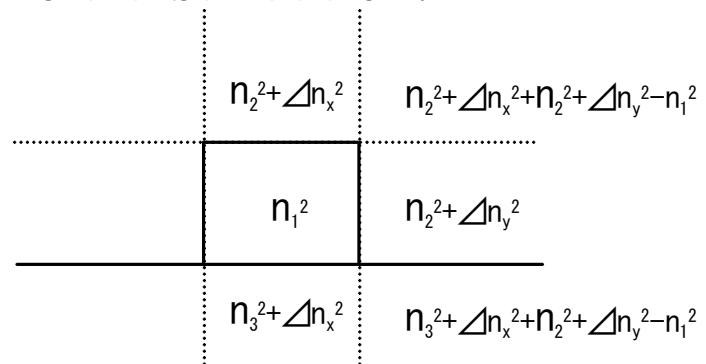

better approximation than EIM and GEIM

(i) Calculate index perturbation.

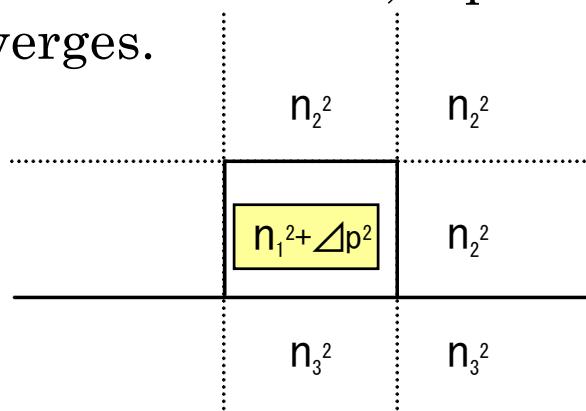

$$\Delta n_x^2 = \left( \frac{k_x}{k_0} \right)^2, \quad \Delta n_y^2 = \left( \frac{k_y}{k_0} \right)^2$$

(ii) Calculate perturbation weighted with a field distribution.

$$\Delta_p^2 = \frac{k_0^2 \int_S |f(x)g(y)|^2 \delta n^2 dS}{\int_S |f(x)g(y)|^2 dS}$$

(iii) Modify the waveguide structure. Then, repeat procedure until perturbation converges.

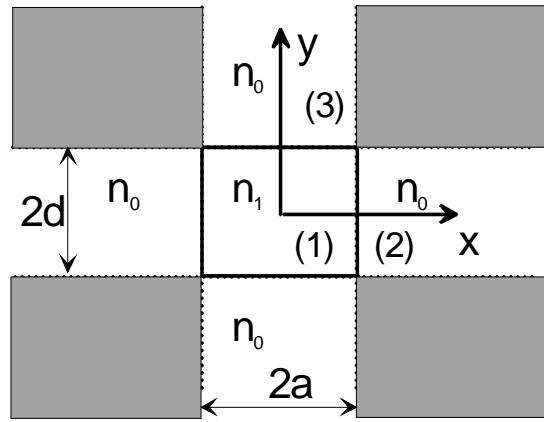

## 6.5 Marcatili's Method

$E_{pq}^x$  mode ( $H_x = 0$ )

$$\begin{aligned}
 & \frac{\partial H_z}{\partial y} + j\beta H_y = j\omega\epsilon E_x \quad \boxed{\qquad} \\
 & -j\beta H_x - \frac{\partial H_z}{\partial x} = j\omega\epsilon E_y \quad H_z = \frac{1}{j\beta} \frac{\partial H_y}{\partial y} \quad \boxed{\qquad} \\
 & \frac{\partial H_y}{\partial x} - \frac{\partial H_x}{\partial y} = j\omega\epsilon E_z \quad \overset{H_x=0}{\longrightarrow} \quad E_z = \frac{1}{j\omega\epsilon} \frac{\partial H_y}{\partial x} \\
 & \frac{\partial E_z}{\partial y} + j\beta E_y = -j\omega\mu_0 H_x \quad \boxed{\qquad} \quad E_y = \frac{1}{\beta\omega\epsilon} \frac{\partial^2 H_y}{\partial x \partial y} \\
 & -j\beta E_x - \frac{\partial E_z}{\partial x} = -j\omega\mu_0 H_y \quad \longrightarrow \quad E_x = \frac{\omega\mu_0}{\beta} H_y + \frac{1}{\beta\omega\epsilon} \frac{\partial^2 H_y}{\partial x^2} \quad \boxed{\qquad} \\
 & \frac{\partial E_y}{\partial x} - \frac{\partial E_x}{\partial y} = -j\omega\mu_0 H_z \\
 & \text{wave equation} \quad \frac{\partial^2 H_y}{\partial x^2} + \frac{\partial^2 H_y}{\partial y^2} + (\omega^2 \epsilon \mu_0 - \beta^2) H_y = 0 \quad \boxed{\qquad}
 \end{aligned}$$

# Marcatili's Method

ignore shaded region

$$\frac{\partial^2 H_y}{\partial x^2} + \frac{\partial^2 H_y}{\partial y^2} + (\omega^2 \epsilon \mu_0 - \beta^2) H_y = 0$$

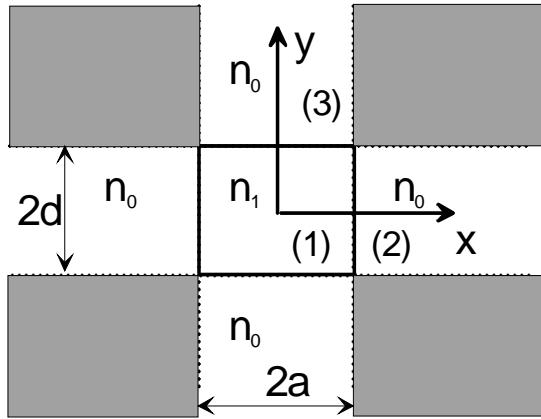

$$H_y = \begin{cases} A \cos(k_x x - \phi) \cos(k_y y - \varphi) & : \text{in (1)} \\ A \cos(k_x a - \phi) \exp(-\gamma_x (x - a)) \cos(k_y y - \varphi) & : \text{in (2)} \\ A \cos(k_x x - \phi) \cos(k_y d - \varphi) \exp(-\gamma_y (y - d)) & : \text{in (3)} \end{cases}$$

$$-k_x^2 - k_y^2 + (n_1^2 k_0^2 - \beta^2) = 0 \quad \phi = (p-1)\pi/2$$

$$\gamma_x^2 - k_y^2 + (n_0^2 k_0^2 - \beta^2) = 0 \quad \varphi = (q-1)\pi/2$$

$$-k_x^2 + \gamma_y^2 + (n_0^2 k_0^2 - \beta^2) = 0$$

# Marcatili's Method

ignore shaded region

interface between (1) and (2)

$$E_z : \frac{1}{n_1^2} \frac{\partial H_y}{\partial x} \Big|_{x=a} = \frac{1}{n_0^2} \frac{\partial H_y}{\partial x} \Big|_{x=a}$$

$$\tan(k_x a - \phi) = \frac{n_1^2 \gamma_x}{n_0^2 k_x}$$

$$\therefore k_x a - \phi = \tan^{-1} \left( \frac{n_1^2 \gamma_x}{n_0^2 k_x} \right)$$

interface between (1) and (3)

$$\tan(k_y d - \varphi) = \frac{\gamma_y}{k_y}$$

$$\therefore k_y d - \varphi = \tan^{-1} \left( \frac{\gamma_y}{k_y} \right)$$

$$\gamma_x^2 = -k_x^2 + (n_1^2 - n_0^2)k_0^2$$

$$\gamma_y^2 = -k_y^2 + (n_1^2 - n_0^2)k_0^2$$

$\beta^2 = n_1^2 k_0^2 - (k_x^2 + k_y^2)$

# Marcatili's Method

$E_{pq}^y$  mode ( $H_y = 0$ )

$$\begin{cases} E_x = -\frac{1}{\beta\omega^2\varepsilon} \frac{\partial^2 H_x}{\partial x \partial y} \\ E_y = -\frac{\omega\mu_0}{\beta} H_x - \frac{1}{\beta\omega\varepsilon} \frac{\partial^2 H_x}{\partial y^2} \\ E_z = -\frac{1}{j\omega\varepsilon} \frac{\partial H_x}{\partial y} \\ H_y = 0 \\ H_z = \frac{1}{j\beta} \frac{\partial H_x}{\partial x} \end{cases}$$

$$\frac{\partial^2 H_x}{\partial x^2} + \frac{\partial^2 H_x}{\partial y^2} + (\omega^2\varepsilon\mu_0 - \beta^2)H_x = 0$$
