

2nd Lecture
Communication Skill in Japanese Industry II (CSJI_II)
Graduate School of Engineering

Time: 15:05 – 16:35, May 28

Place: Room W331, O-okayama West Bld

Title: **Experiences in Energy Industries**

Lecturer: **Mr. Sumio FUJII**, Acting General Manager, Nuclear Systems
Engineering Department, Mitsubishi Heavy Industries, Ltd

Abstract:

The lecturer worked in a Japanese electric power utility for ca.30 years, and then started working for a Japanese heavy industry which provides a half of products to foreign countries. The former is a monopolistic and domestic company selling only one product. The latter produces more than 700 different kinds of products and sells them to over-sea customers. By comparing them, it will be discussed in the lecture that different business styles request different abilities and attitudes for employees, and consequently lead to different company cultures.
